NoCode PDF[®]

Efficient PDF creation in ServiceNow[®]

In today's digital business world, the efficient creation of documents is crucial. NoCode PDF[®] offers an innovative solution for generating dynamic, multilingual and CI-compliant PDF documents within ServiceNow[®].

Seamless integration

NoCode PDF[®] offers seamless integration of the app from the ServiceNow[®] Store and can be operated without any programming knowledge.

Intuitive user interfaces

Intuitive user interfaces make it easy to create PDFs, letters and other documents from ServiceNow[®].

High degree of individualization

The high degree of individualization and automation in document creation is a pleasure.

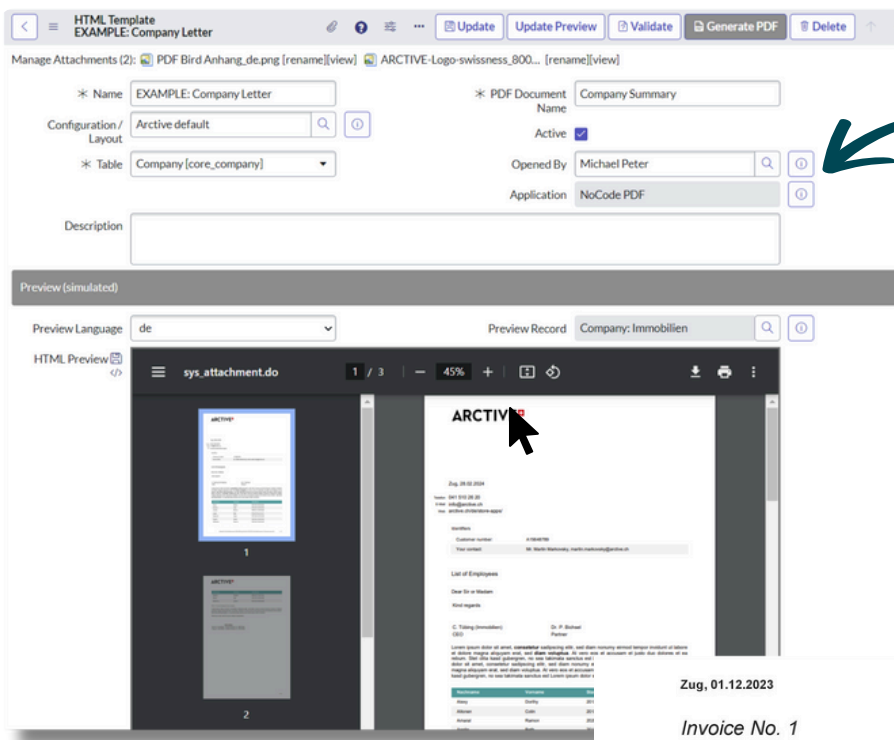

Seamless integration

Smart connection to ServiceNow®

Although PDF generation is possible within ServiceNow® thanks to out-of-the-box features, it requires programming knowledge and expertise in this area. This intensifies maintenance, increases susceptibility to errors and requires intensive know-how sharing.

NoCode PDF® builds on the existing feature and enables the efficient creation of documents without the need for programming.

Seamless integration
in ServiceNow®

Whether in the Flow Designer, in UI Actions, in the portal or in the workspace - can be used completely **without media breaks**

Your order 0101-12-2023
Our offer Installation Service
Our contact Martina Müller
VAT number CHE-100.100.100 VAT

We thank you for your order and would like to invoice:

Position	Description	Quantity	Unit price	Total price
1	Installation Service	1.00	CHF10'000.00	CHF10'000.00
			Net Total	CHF10'000.00
			VAT	CHF770.00
			Invoice amount	CHF10'770.00

This invoice is payable without deduction until January 01, 2024.
Bank details: UBS Schweiz AG, IBAN: CH10 1010 1010 1010 1010

Kind regards,
Martina Müller

Highly configurable

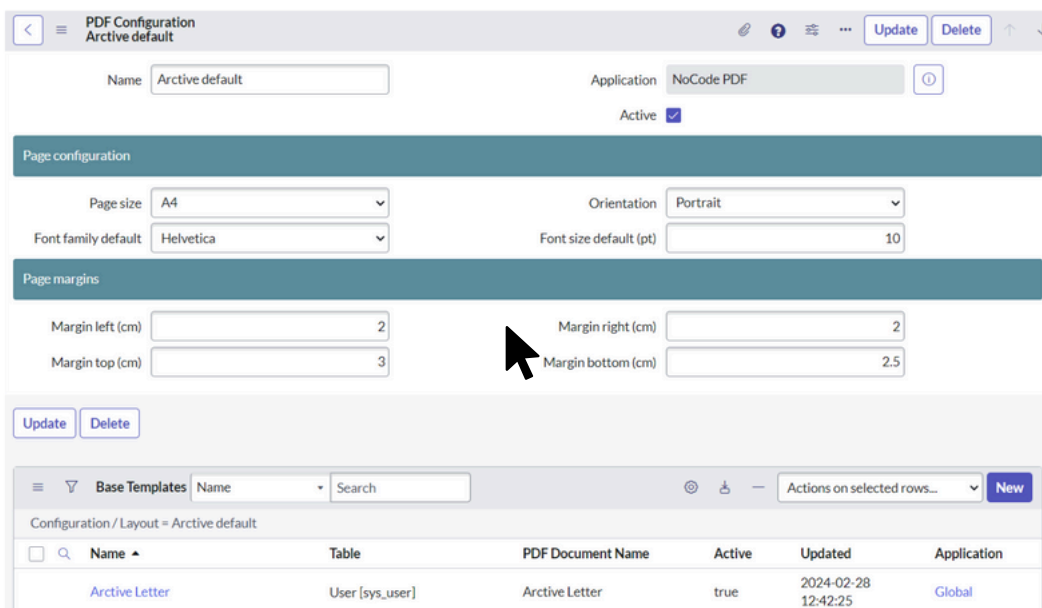

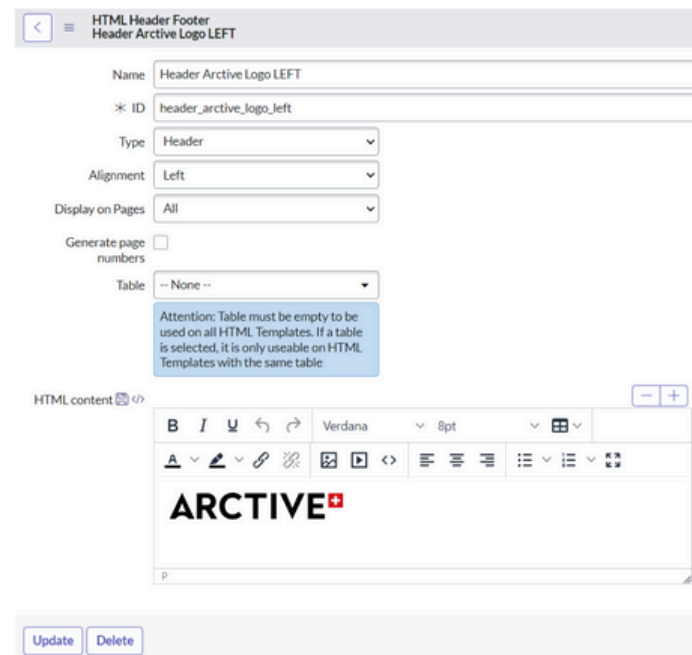

Configurable templates

Thanks to a wide range of configuration options and the simple creation of templates, reusability is ensured. The intuitive user interface enables the effortless creation of PDFs, letters or emails.

Easily create **dynamic templates** using **text modules, attributes** and **conditions**

Creation of the PDF documents in your desired **corporate design**

Page formats, margins, font & much more individually configurable

Data-based generated

Dynamic data query

Thanks to the so-called transformation function, you can define which data should be displayed in which format within your PDF documents in a standardized way.

Unified setting of dates regardless of their original format

Variable dimensions are standardized by NoCode PDF® thanks to **automated calculation**

All data from ServiceNow® as a basis

Do you want to integrate data into the PDF that is not visible on the data set to be generated, but is related?

NoCode PDF® can access this for you. All data stored in ServiceNow® can be accessed via the respective connection thanks to the platform's data structure.

Use this element, if you want to include information contained in the base record that you are generating

Name EXAMPLE: arctive.example.senderInformation

* ID arctive.example.senderInformation

Impacts

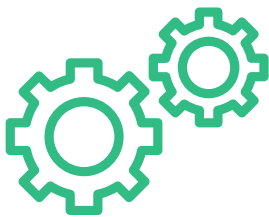

Performance & Reliability

The PDFs are rendered on the server side, which **increases performance** and **reliability**.

All generated documents can be **automatically saved**, sent by e-mail or added as an attachment to a process. For example, invoices, contracts or service reports are created automatically **based on real-time data**.

Deep integration into work processes

The **corporate design** can also be implemented consistently - from the color scheme and logos to headers and footers. The close integration with ServiceNow® enables deep integration into **existing work processes**, for example to support **customer service management, HR, facility or field service**.

Huge time savings

The time saved in document creation allows resources to be used elsewhere and in a **more valuable way**.

The approach of dynamically fillable documents thanks to templates means that **large numbers** of documents can be generated **in seconds**.

Automated working

Employees benefit from **simple, standardized** and **fast PDF generation**. Hardly any manual work, **automated** and **error-free** - these are the major advantages.

Reviews

servicenow
Store

"NoCode PDF® has greatly advanced our document generation process. The intuitive interface allows us to create branded, multilingual PDFs directly within ServiceNow without any coding. This has significantly reduced our reliance on developers and accelerated our workflow."

Ihre Energie.

"As a Product Owner, integrating NoCode PDF® into our ServiceNow environment was a game-changer. The ability to design templates that align with our corporate identity and automate document creation has streamlined our operations. The app's flexibility and ease of use are truly impressive."

"NoCode PDF® helps us document quality events such as 4D and 8D reports in a structured and consistent way. By pulling data from multiple ServiceNow records into a single PDF, it provides a reliable snapshot of each case. This simplifies action tracking, improves customer communication, and supports audit compliance."

"We generate PDFs to persist records at specific times for the quality assurance process and to make these states easily available to an audit process. NoCode PDF allows us to use data from several records in one document. Thereby it creates a snapshot of a distributes situation in one place."

Reviews

"At SBB, we have been using the NoCode PDF® app by Arctive for a long time now, and we like how it reaches all of our needs. It's perfectly embedded into our process and into ServiceNow so that the creation of letters based on a PDF template happens effortlessly. The seamless integration greatly simplifies our workflows and supports our agents in their daily business. This app has revolutionized document creation in our company; it's exactly what we've been searching for all along."

SBB CFF FFS

"We are using the app to generate PDF documents for our customers. The documents are styled according to our company CI. Configuration is extremely flexible and uses content of several records in one PDF document. Even the generation of loads of documents (we used it for the communication of the launch of a new platform) worked flawlessly. Definitely recommended!"

Why us

At Arctive, we support companies in their digital transformation based on the ServiceNow® service management products (CSM/ITSM/HRSM/etc.).

ARCTIVE 

As experts in process optimization, we implement customer-specific IT solutions that are sustainable and efficient, always in close cooperation with you and directly on site. On this basis, we take responsibility for the implementation and effectiveness of digital solutions.

Business Solutions

Developed from customer needs

Besides NoCode PDF we have leveraged our extensive experience as a ServiceNow® Partner to develop additional business solutions that are customized to meet the unique needs of our clients. All apps are ServiceNow® certified and available for download in the ServiceNow® Store.

Visual Kit®

Simple visualization of complex data within ServiceNow®

Deployment Guide®

User-friendly implementation documentation

Portal Pro®

Super Charger for the service portal to increase performance

DevOps Utils®

Accelerated operation with real-time, status monitoring

FAQ

Certified App

Can I fill out a PDF form automatically?

This is one of the use cases for NoCode PDF®. All you need to do is create a new PDF template by selecting NoCode PDF > PDF Templates > All PDF Templates. Name the PDF template, select the table of data to be filled in and add the attachment of your PDF form. The individual fields of the PDF form are automatically recognized by PDF Bird and made available to you for configuration. Now all you have to do is specify which values are to be inserted where in the form.

What does NoCode PDF® cost?

The 12-month license of our business solution is tailored to the value that can be realized within your company. With our free demo offer, we analyze your specific use case and provide you with a perfectly tailored offer.

What is the difference between PDF templates and HTML templates?

A PDF template is required for the automatic filling of form PDFs. This can be implemented very easily thanks to NoCode PDF®. With an HTML template, you define what a custom PDF should look like and what data is used to generate it.

How do I create an HTML template?

Creating a template is also super easy. Simply navigate via the filter navigator to NoCode PDF> HTML Templates > All HTML Templates and click on New. The name will be used for display on the platform. The name of the PDF document is the file name of the generated PDF (without .pdf).

NoCode PDF® Tutorials

Our [YouTube channel](#) contains various instructions and tutorials on various issues relating to our NoCode PDF® application.
